

Usage manual

The name of the JQL function is `linkedIssuesInJQL`.

It takes from one to three parameters:

No.	Type	Name	Description	Required
1	string	JQL query	Query returning all linked issues	yes
2	string	Issue Link type	Name of the linking. All Issue Link types can be found in JIRA Administration page described in: https://confluence.atlassian.com/adminjiraserver073/configuring-issue-linking-861253998.html	optional
3	string	Direction	Direction of the linking. Can be "inward" or "outward".	optional

Examples of usage:

```
issue in linkedIssuesInJQL("issuekey = PROJ-1")
```

```
issue in linkedIssuesInJQL("issuekey = PROJ-1", "Blocks")
```

```
issue in linkedIssuesInJQL("issuekey = PROJ-1", "Blocks", "outward")
```
